- IP66

CORTEM® GROUP

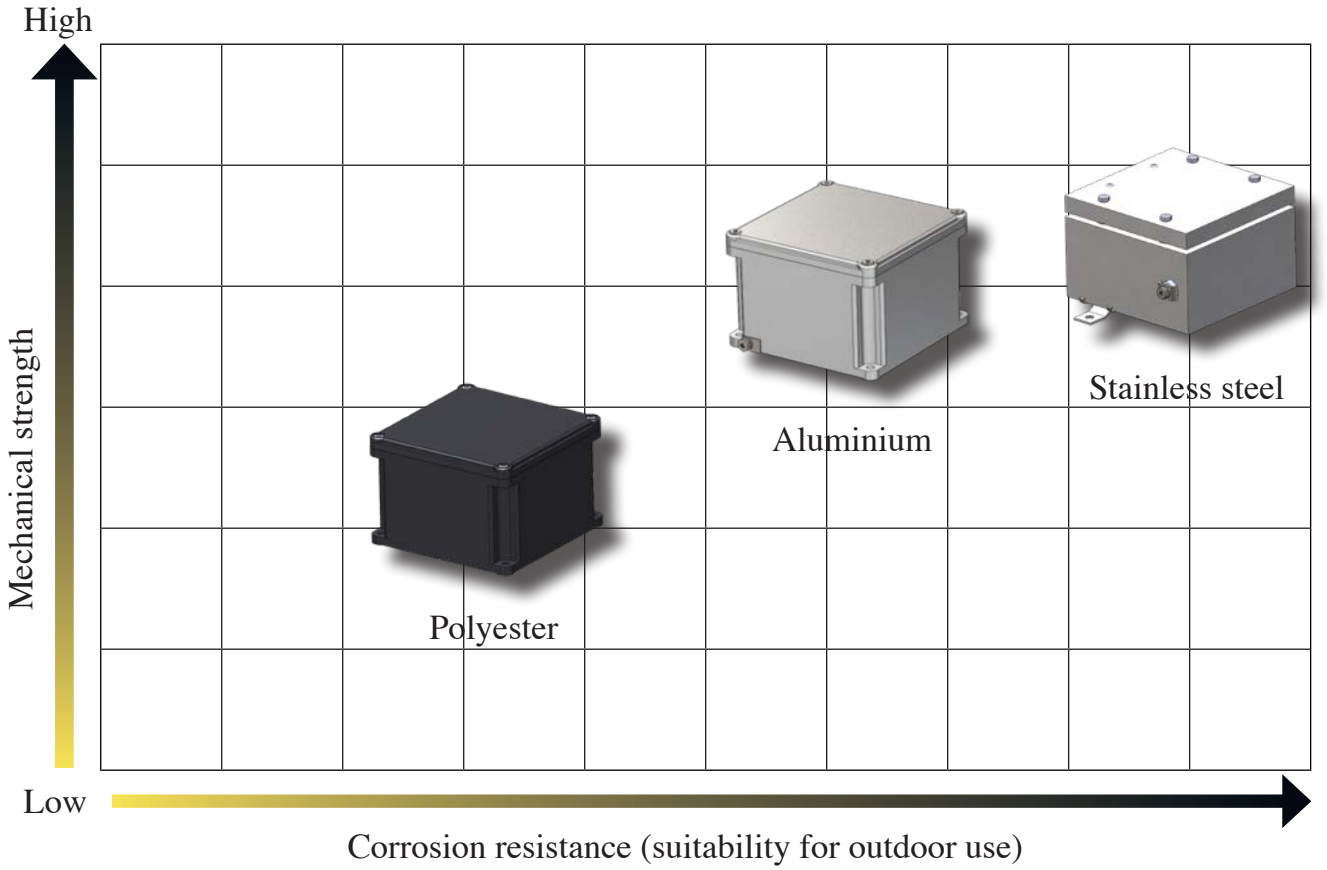

SA-P series junction boxes: criteria for choosing the right product

When it comes to deciding on an increased safety enclosure, there is a whole series of essential data to be taken into account if you are to make the right choice: the mechanical strength of the materials, corrosion resistance, the IP protection rating and IK impact protection rating in the case of enclosures for watertight/ industrial use.

Mechanical strength

Properties	Unit	Stainless steel	Aluminium	Polyester
Density	g/cm^3	8,0	2,65	1,7
Tensile strength	Mpa	500-700	80-110	130
Elongation	%	60-40	4-10	2
Modulus of elasticity	Gpa	193	79	11
Yield strength	Mpa	≥ 200	80-165	-
Coeff. of thermal expansion (20-100°C)	$10^{-6}K^{-1}$	16	21	-
Resistivity	Ωm	$7,5x10^{-7}$	$4,8x10^{-8}$	-
Electrical conductivity	$\Omega^{-1}m^{-1}$	$1,33x10^{6}$	$2,08x10^{7}$	-

The graph below gives an overview of what use the various materials are suitable for based on the mechanical stress and harshness of the environmental conditions likely to be encountered.

IP PROTECTION RATINGS (IEC 529, EN 60529-4, CEI 70-1 ed. 11/92)

The table gives protection ratings in accordance with standard CEI 70-1 ed. 11/92. Ratings are identified by the acronym IP followed by 2 digits, to which 2 letters may be added, indicating the degree to which persons are protected against access or other properties There is some variation in the application of ratings 7 and 8 relating to the ingress of liquids, with these ratings not always meaning that the item is suitable for lower levels (whereas IP rating x4 also covers the lower levels).

IMPACT PROTECTION RATINGS

This classification shows the acceptable level of strength, when evaluating a product's safety, and is mainly employed in relation to testing on electromechanical products.

1ST DIGIT
PROTECTION AGAINST SOLID OBJECTS

0	Not protected
1	Protected against solid objects greater than 50mm in Ø
2	Protected against solid objects greater than 12mm in Ø
3	Protected against solid objects greater than 2.5mm in Ø
4	Protected against solid objects greater than 1mm in Ø
5	Protected against dust
6	Totally protected against the ingress of dust

2ND DIGIT
PROTECTION AGAINST MOISTURE

0	Not protected
1	Protected against vertically falling drops of water
2	Protected against rain when tilted up to 15°
3	Protected against rain when tilted up to 60°
4	Protected against splashing water
5	Protected against jets of water from all directions
6	Protected against heavy seas
7	Protected against the effects of immersion
8	Protected against the effects of continuous immersion

PROTECTION AGAINST EXTERNAL MECHANICAL IMPACT *

IK00		Not protected
IK01	0.25 kg, 5.6 cm	Protected against impact energy of 0.15J
IK03	0.25 kg, 14 cm	Protected against impact energy of 0.35J
IK05	0.25 kg, 28 cm	Protected against impact energy of 0.7J
IK06	0.25 kg, 40 cm	Protected against impact energy of 1J
IK07	0.5 kg, 40 cm	Protected against impact energy of 2J
IK08	1.7 kg, 30 cm	Protected against impact energy of 5J
IK09	5 kg, 20 cm	Protected against impact energy of 10J
IK10	5 kg, 40 cm	Protected against impact energy of 20J

ADDITIONAL LETTER**

A	Protected against access with the back of the hand
B	Protected against access with a finger
C	Protected against access with a tool
D	Protected against access with a wire

OPTIONAL LETTER

H	High-voltage device
M	Tested against the harmful effects of water ingress with the equipment running
S	Tested against the harmful effects of water ingress with the equipment not running
W	Suitable for use in specified atmospheric conditions

* As per IEC EN 50102: 1996-05; IEC EN 60078-2-7-5: 1998-09.

** Optional letter describing protection against access by persons. Only used if protection against access to hazardous parts is greater than that indicated by the first digit, or if only protection against access to hazardous parts is given and an X is used in place of the first digit.

SA-...P series Polyester junction boxes 'Ex e'

SA...P series junction boxes are made from fibreglass-reinforced polyester. Because they are highly resistant to contamination from fuel oils and mechanical shock, in addition to being lightweight and practical, they can be installed in all industrial plants, especially those where there is a potential risk of explosion and/or fire due to the presence of combustible gases or dust, classified as Zone 1, 2, 21 and 22. The enclosures have special holes made in the base for easy wall mounting. The lid features a silicone gasket that is resistant to low and high temperatures and comes complete with AISI 304 stainless steel screws, which are arranged around the outside of the lid to ensure a tight seal with the IP66 rating. SA...P series enclosures are mainly used as junction boxes/ for routing cables for analogue or digital signals and/or for control and monitoring associated with equipment such as motors, fans, pumps and/or for giving physical readings such as flow rate, level, pressure, temperature, current, etc.. Terminal strips can be arranged inside the enclosure in various different configurations. The Cortem sales team will be able to advise you what enclosure best meets your needs based on: maximum number of terminals, number of holes per side, minimum distance involved and maximum power dissipation, ensuring everything is within the limits allowed by the certificate. 'Ex e' control, monitoring and signalling devices can be mounted on the lid in various different configurations based on your requirements and within the limits allowed by the certificate.

Cortem Group labels its products with a non-removable adhesive label featuring a hologram and an alphanumerical univocal code, as a safety measure against the illegal sale of fakes so that all the products are guaranteed as original. Non-compliance with the International standards entails serious risks for the environment, especially for those working daily on the plants.

TYPE AND APPLICATION

Choosing an appropriate container is a key step in the project development process, making it essential to approach the decision systematically, evaluating all variables methodically: where our equipment is being installed, the environmental conditions on site, what degree of protection it must have, what space is available and how it is due to be set up. Once you have processed all this information, you should be able to determine which product best suits the design requirements in question.

ENVIRONMENTAL CONDITIONS

The first factor to consider is what environmental conditions the equipment is going to be installed in, whether it will be indoors or outside, and what environments it is required to operate in: pharmaceutical, chemical, petrochemical, food, shipbuilding, agricultural industries...

DIMENSIONS

The size of the space available for inserting the enclosure and its components must be determined early on in the process.

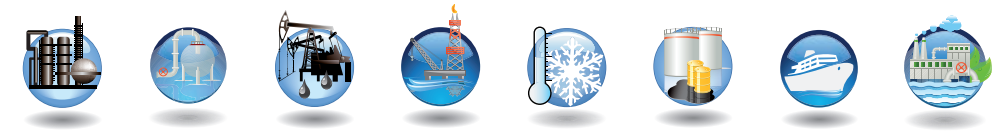

DESIGN

Taking into account the technical aspect, product design and appearance is also important in ensuring the equipment to be installed in the enclosure is integrated seamlessly. A Cortem team of experts is on hand every day to address your questions and come up with the best solutions.

Cortem enclosures have passed:

- IP protection testing;
- IK strength testing;
- salt mist testing for corrosion resistance;
- heat resistance testing;
- low temperature resistance testing.

Application sectors:

Oil refineries | **Chemical and petrochemical plants** | **Onshore plants** | **Offshore plants** | **Low temperatures** | **Fuel depots** | **Ships and shipbuilding** | **Wastewater treatment**

GENERAL MECHANICAL PROPERTIES

Body and lid:	Made from polyester resin in black with antistatic properties
Impact protection rating:	IK10
Gasket:	Silicone, located between body and lid
Mounting:	Polyester feet for M6 screws
Certification label:	Aluminium plate riveted into lid
Bolts and screws:	Stainless steel captive variety

ACCESSORIES AVAILABLE ON REQUEST/ SPECIAL REQUESTS

Possible drilling of the enclosure bottom a maximum of one hole in the centre is allowed, 1" NPT o ISO M32x1,5.
Internal anti-condensation coating RAL 2004 (pure orange)
External polyester coating in different colour (specify the RAL number)
Breather valve; Drain valve
Internal mounting plate: stainless steel (code B...-229)
Earth screws in stainless steel
Terminal block mounting rails (code OBO2060/S)
ATEX-CERTIFIED TERMINALS: terminals must be chosen from the list of approved manufacturers: Cabur, Phoenix, ABB Entrelec, Wago, Weidmuller. When supplied as an Ex i enclosure (for low-voltage instruments), it comes with suitably identified blue terminals.
Only use cable glands that meet ATEX, IECEx directive requirements. Use gaskets and lock nuts on entries to ensure IP66 protection.

CORTEM® GROUP

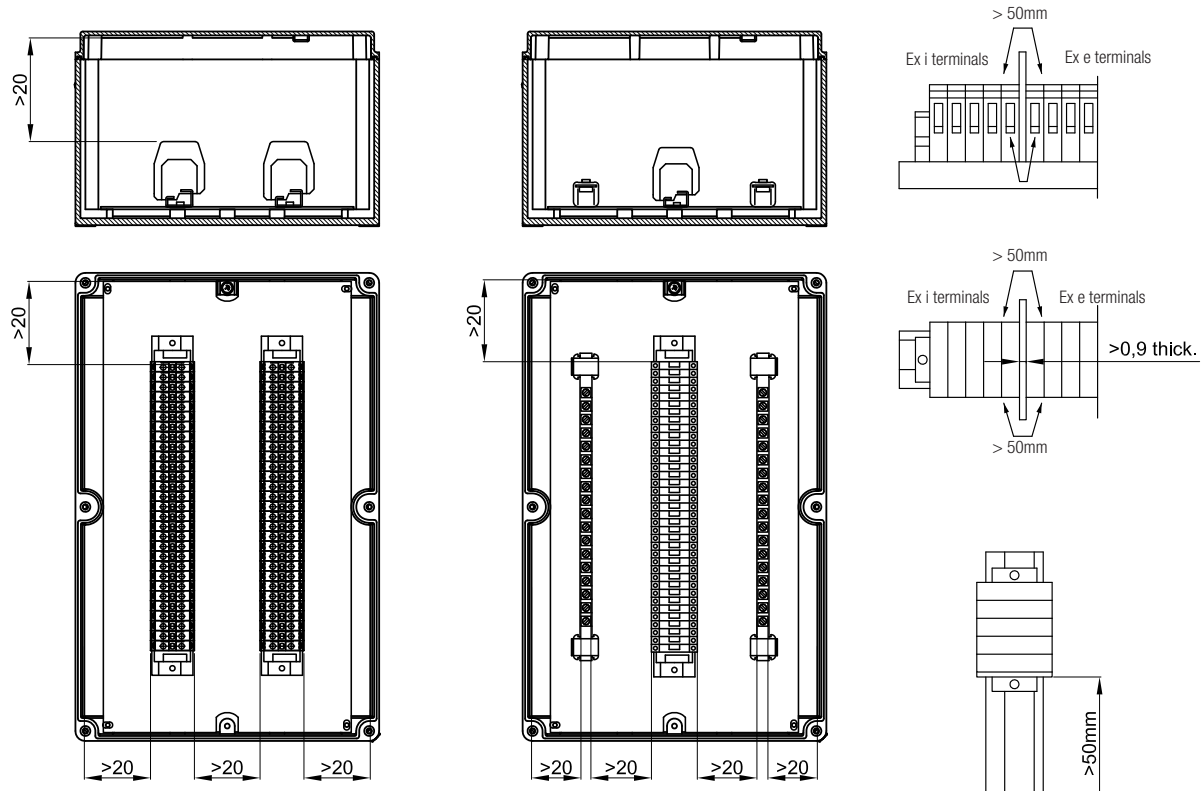

These enclosures are customized based on size, on the number of terminals or cables they are due to accommodate, or taking into account the number of cable entries and cabling requirements inside a system. Hence we can produce tailor-made solutions as long as you provide us with the appropriate parameters required at the quote request stage, such as the number of cable glands, unions or sealing fittings to be installed, so that we can determine the most suitable size of enclosure. All terminals can be fitted with your requested accessories and mounted on special rails that are fastened to the enclosure's internal mounting plates. Terminal strips can be arranged in various ways, as specified by the customer and always within the limits allowed by the certificate. The options are vertical, horizontal, in a number of rows, or on different levels using suitable spacers.

ELECTRICAL FEATURES

Ex II 2GD Ex ia IIC T... Gb - Ex ia IIIC T... Db IP66	Ex i terminals only	Enclosures containing intrinsic safety terminals to standard EN 60079-11; enclosures are still category 2

Examples of terminal strips with minimum installation distances

Notes:

Reference must be made to the minimum distances given, bearing in mind the space required for internal wiring.
Only ATEX-certified terminals are allowed inside the enclosures.
Ex i rated terminals must be suitably labelled or coloured differently so they are clearly identifiable.
Ex i cable entries must be suitably identified with either labelling or blue markings on cable glands or the enclosure's sides.

TYPE OF ENCLOSURE	MAXIMUM NUMBER OF TERMINALS HOUSED

SA473018/P	2x97	2x74	2x63	2x51	2x41	2x34	2x25
SA623018/P	2x133	2x101	2x86	2x70	2x56	2x46	2x35

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR terminals.
The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

The permissible maximum power dissipation, in order to retain a T6 temperature class with an ambient temperature up to +40°C or T5 class with an ambient temperature of 55°C, is not to exceed the values given in the tables below.
For an ambient temperature of +60°C, maximum power dissipation must be reduced by 25%, and rated current reduced by 15%.
The maximum current values for terminal strips used for low-voltage circuits (signalling units) with a T6 temperature class and maximum ambient temperature of +60°C or T4 and maximum ambient temperature +65°C and +85°C, are as follows:
+60°C T6 -> max 1A Ex e, max 100mA Ex ia
+85°C T4 -> max 10A Ex e, max 100mA Ex ia
The values given in the tables on the coming pages refer to the maximum number of conductors allowed for a conductor with a given cross-sectional area and a given maximum current. All incoming wires and active internal links (made by wires) count as wires. Earth connections (i.e. passive connections) do not count.
When DIN/Omega rails are installed on the internal mounting plate (instead of using the relevant mounting plate fastening holes), the number of terminals may be slightly less than the number given in the tables.
Other types of terminals can be used up to the space limit of the box. Whatever the case, all terminals used shall be ATEX and/or IEC Ex certified. Size 35mm^2 terminals can be used for conductors with a cross-sectional area of 25mm^2.
The maximum number of terminals and maximum number of rows given in the tables is an indicative value: you must take into account the cable entries on the sides of the boxes. The internal overall dimensions of cable glands/lock nuts and the overall dimensions of conductors must be taken into consideration to allow for wiring.
In some cases, it may be necessary to reduce the number of terminals or the number of rows.
Example of how to calculate the maximum number of conductors.
Referring to table SA141410/P: 6 conductors with 6mm^2 cross-section with 26A continuous current is the limit of this box.

Consequently, box SA141410/P is suitable for containing 3 x 6mm^2 terminals (2 conductors for each terminal) with a max. current of 26A.
There is space for 11 x 6mm^2 terminals in the box. The remaining 8 terminals (11-3) can be added and used for low-current circuits indicated in area "1" of the table (in this case max. 8-10A).

Combined mounting for electrical circuits with different sized cables is possible provided the values given are used proportionally. For example:

Nominal X-sect. area (mm^2)	Current (A)	Quantity	Capacity
2,5	8	16 (di 46)	34,8%
4	11	12 (di 36)	33,3%
10	26	4 (di 13)	30,8%
		Totale	98,9% <100%

Instructions for determining which enclosure is best suited based on the planned number of conductors and terminals.

: In this section of the table that has not been filled in, once you have followed the instructions and complied with the values given for the enclosure's internal wiring, you can add as many terminals as you want up to the space limit of the box.

: Any wiring that falls within this section of the table that has not been filled in is not covered by the certificate.

"***C. No.***" row: the values given refer to the maximum number of CABUR terminals physically allowed inside the relevant enclosure. These values are expressed as the product of the rows multiplied by the number of terminals on each row.
"***W. No.***" row: the same as above, but this time referring to Weidmuller terminals.
The terminal brands are mentioned just to give an idea of the quantity of terminals that can be housed inside the enclosure.
The other values given in the cells along the table's diagonal define the maximum number of conductors allowed, based on their cross-sectional area and maximum current.

Tables showing maximum number of conductors

$$\left(\text{N° of terminals} = \frac{\text{n° of conductors}}{2}\right)$$

As required by the current standard, holes can be drilled by Cortem or by authorized partners who hold a production notification in accordance with ATEX Directive .

Research conducted using Cortem's new NAV and NEV series cable glands.

SA-...P series Polyester junction boxes 'Ex e'

Zone 1,2,21,22.
Degree of protection IP66.
Polyester body and lid.
Silicone gasket.
Stainless steel bolts and screws.
Impact protection IK10.

Ordering details

Standard polyester enclosure:	**SA301410/P**
Width/Depth/Height:	**305/147/110mm**

Certification data for enclosures with terminals

Group II Category 2GD

Zone 1- Zone 2 (Gas) Zone 21 - Zone 22 (Dust)

II 2GD Ex eb IIC T.. Gb - Ex tb IIIC T.. Db IP66

II 2GD Ex ia IIC T.. Gb - Ex ia IIIC T.. Db IP66

II 2GD Ex eb ia IIC T.. Gb - Ex tb ia IIIC T.. Db IP66

Ambient temperature: -40°C +55°C (+40°C)

Certification:

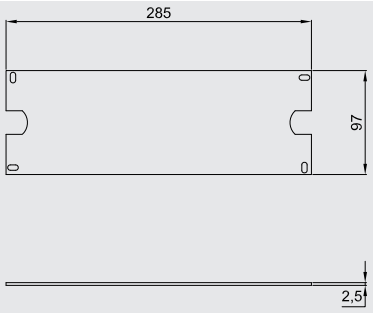

CESI 03 ATEX 333	(ATEX)
IEC Ex CES 13.0001	(IECEx)
Russian	(TR CU)
Brasilian	(INMETRO)

Accessories

Internal mounting plate:	**CODE**
2.5mm-thick aluminium:	**B31-229**
2.5mm-thick galvanized steel:	**B31-229AC**
2.5mm-thick stainless steel:	**B31-229IN**
Hinges (two each type):	**B-0106/R**
Breather and drain valve:	**ECD-210S**

Other:
1mm-thick brass continuity plates
Terminals
Cable glands
Through earth screw

Internal mounting plate dimensions

Max. number of terminals

X-SECT.	QTY.
1,5 mm²	1x57
2,5 mm²	1x44
4 mm²	1x37
6 mm²	1x30
10 mm²	1x24
16 mm²	1x20
25 mm²	1x15

Eg. 2x22= 2 rows of 22 terminals (total 44 terminals). The maximum number of standard terminals refers to the mounting of CABUR terminals.
The data in the table are given as a rough guide only based solely on the size of the enclosures and the space taken up by the terminals.

As required by the current standard, holes can be drilled by Cortem or by authorized partners who hold a production notification in accordance with ATEX Directive .

Research conducted using Cortem's new NAV and NEV series cable glands.

Control, monitoring and signalling units are used to produce control boards that, when positioned near the electrical equipment being controlled, enable the electrical system to operate correctly and guarantee the safety of personnel when maintenance is being performed on the system. Because they are fitted with a Manual/Automatic selector, they allow operators to select the appropriate conditions to enable work to be performed entirely safely. They offer protection and control for electrical equipment and control circuits located in explosion hazard areas and in particularly aggressive environments. They are used to hold electrical equipment, such as switches, indicators, contactors, transformers, analogue and digital components, etc.... with the option of external control by using lid-mounted Cortem control and signalling devices, such as control levers, pushbuttons, indicator lights, etc.... Cortem designs, develops and supplies full cabling for one or more enclosures tailored to your specific requirements, producing panel boards - including even extremely complex solutions - and providing a full inspection and testing service on request.

ELECTRICAL FEATURES

Rated voltage: 600 V ac/dc
Max. current on contacts: 16 A
Rated frequency: 50 / 60Hz

MINIMUM DISTANCES BETWEEN CORTEM Ex e CONTACTS (e.g. with reference to CESI 03 ATEX 115 certificate)

Key:
1. indicator light M-0612
2. rotating selector M-0604
3. emergency stop pushbutton M-0605
4. contact block M-0530
5. contact block M-0531
6. pushbutton M-0603
7. earth bar
8. terminals
9. internal mounting plate

Notes:
"e">12mm: standard version.
Suitable for voltage U<800V
"e">5mm: special versions.
Suitable for voltage U<250V

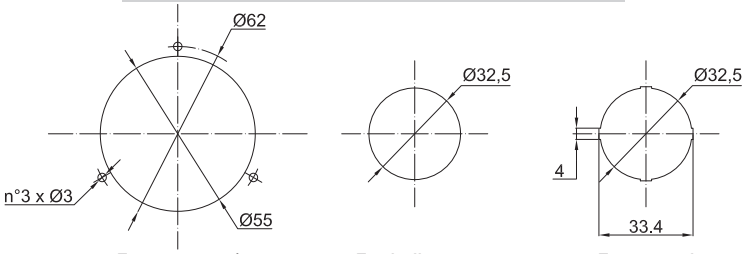

When determining enclosure size, what holes are drilled and what devices can be installed, we also need to take into account the space required for internal wiring and running the cables.

Features of junction boxes for control, monitoring and signalling units

TYPE OF ENCLOSURE	Drilling area mm
SA090907/P	70x70
SA111108/P	90x90
SA171108/P	90x150
SA141410/P	127x127
SA301410/P	127x285
SA302310/P	210x285
SA302318/P	210x285
SA473018/P	285x450
SA623018/P	596x280

TYPE OF HOLES DRILLED

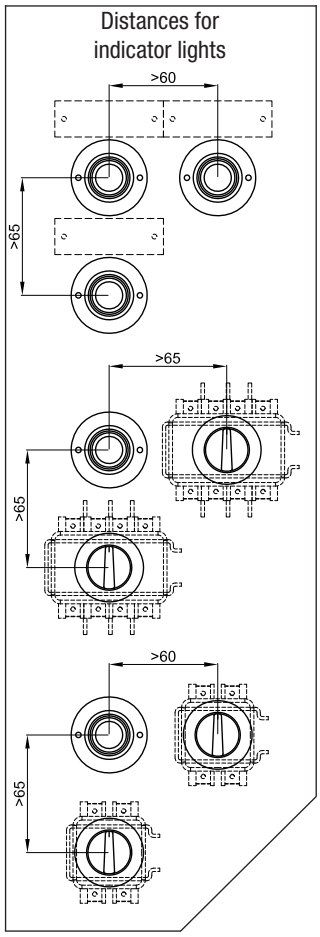

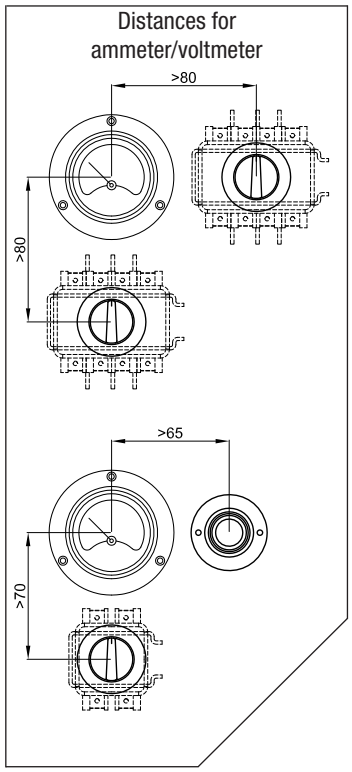

For ammeter/ voltmeter

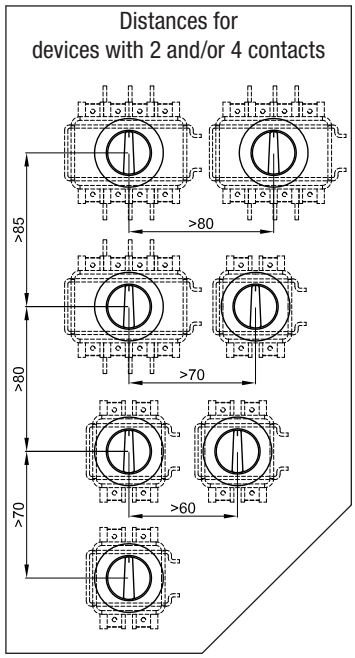

For indicator light

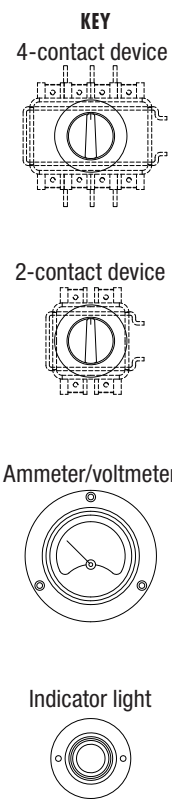

For control devices

MINIMUM DISTANCES BETWEEN CORTEM Ex e DEVICES FOR PUSHBUTTON CONTROL STATIONS

Notes:

Minimum distances between devices worked out for use of standard 60x20 plates.

Option of using up to 4 contacts per device for pushbutton M-0603 and selector M-0604.

Option of using up to 2 contacts per device for emergency stop pushbutton M-0605.

For more information, refer to the Ex e control, monitoring and signalling devices chapter.
